RME 3204: Syllabus

- Introduction: Introduction to Control Systems and their Representation by Different Equations.
- Transfer Functions: Laplace Transforms, Mathematical Model of Physical System, PI and PID Controllers, Hydraulic and Pneumatic Controllers, Time Domain Analysis, Transient Response of First and Second Order Systems.
- Introduction to Non-linear Control: State Space Analysis, Optimal and Adaptive Control, Introduction to Discrete-time Systems and Z-transform.
- Modern Control System: Concepts of States, State Variable and State Models Linear Continuous Time and Discrete Time, State Space Models, Similarity Transformation, Transform Function to State Space Representation, Controllability and Stabilizability, Absorbability and Detectability Canonical Decomposition, Pole Assignment by State Feedback. Observers, Continuing State Feedback with an Observer.
- Controller and Final Control Element: Control Valves, Controller Configuration, System Control, System Design, Common Control Methodologies: P, D, I, PI, PD and PID.
